

MYRAC TONSILLECTOMY PROBE (MYC-70T)

"Swift Precision. Safer Tonsillectomy"

Designed for cold ablation tonsillectomy with tri-wire technology, offering precise cutting and coagulation with reduced blood loss

KEY FEATURES:

Tri-wire electrode for focused ablation

Minimizes intraoperative bleeding

Supports faster recovery with cold technique

Simultaneous cutting & coagulation

MYRAC ADENOIDECTOMY PROBE (MYC-70AT)

“Dual Action. One Clean Sweep”

Optimized for rapid adenoid tissue removal with a wide flat tip, integrated suction, and flexible access to the nasopharynx

KEY FEATURES:

Flat tip for rapid tissue removal and hemostasis

Broad suction for clear visibility and less bleeding

Malleable shaft for precise nasopharyngeal access

Minimizes tissue charring

MYRAC LARYNGEAL PROBE (MYC-60L)

“Voice-Safe Power for Laryngeal Precision”

Designed for tracheal stenosis and laryngeal lesions, with a long tip and flexible shaft for deep, precise access

KEY FEATURES:

Long tip for deep access to laryngeal and tracheal regions

Malleable shaft for angled, precise navigation

Smooth tip enables delicate ablation with reduced thermal injury

Excellent visibility in narrow spaces

MYRAC MINI-LARYNGEAL PROBE (MYC-60ML)

“Ultra-Fine Control for Delicate Spaces”

Designed for pediatric and narrow airways, with a slim, long tip and flexible shaft for precise subglottic access and safe tissue removal

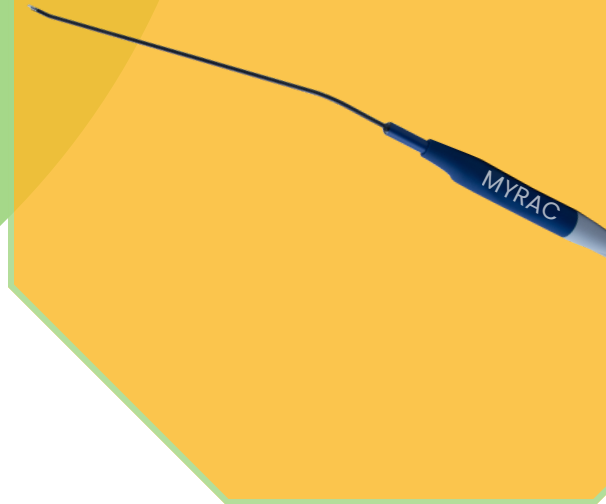

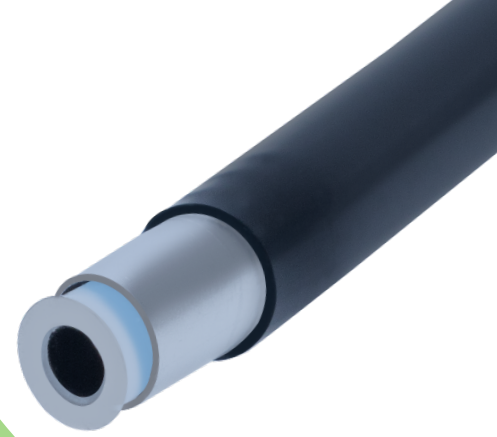

KEY FEATURES:

Long, slim tip for precise subglottic access

Malleable shaft for easy navigation in tight spaces

Optimized for pediatric and delicate airway anatomy

Minimizes trauma, post-op edema, and hoarseness

MYRAC NASAL TURBINATE PROBE (MYC-45T)

“Breathe Better. Ablate Smarter”

Enables precise submucosal ablation with a sharp tip for easy entry and three ablation ports for controlled, uniform tissue reshaping

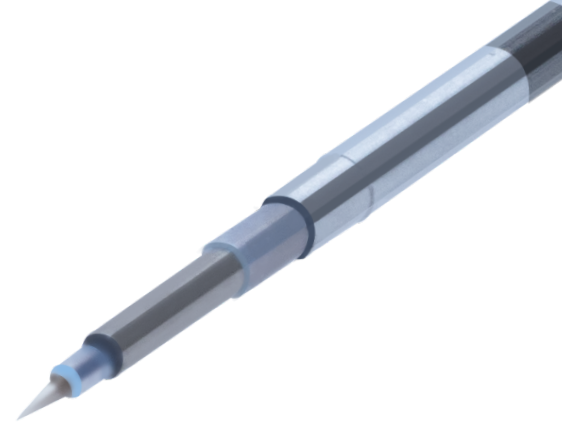

KEY FEATURES:

Sharp tip for effortless submucosal entry

Triple ablation ports for even energy distribution

Precision control for targeted turbinate reduction

Minimally invasive and effective design
